

Methods

Study Sample

- 26,648 non-institutionalized adults with disabilities, ages 18-64.
- Identification of people with disabilities: “Yes” to any of the following types of limitations in any pertinent interview rounds of a given year.
 - Functional limitations
 - Sensory limitations (visual or hearing impairment)
 - Cognitive limitations
 - Use of assistive technology

Statistical Analysis

- Outcome variable: having a usual source of medical care (USC)
 - Emergency Room is not considered a USC.
- Three sequential multivariate logistic regression models
 - Model 1: Race/ethnicity only
 - Model 2: Model 1 + Demographic Characteristics (sex, age, marital status, education, region)
 - Model 3: Model 2 + Economic Factors (family income, employment, insurance)
