I recently received a new iPad Mini. Unfortunately, when I laid it in on its side in my original Traveling Eileen, the plastic lip was too high and covered up my lower icons. I quickly came up with this new portable and collapsible invention I call the Mini-Lean. It is made from one 8" x 12" sheet of corrugated plastic. Four score lines are made on one side as indicated in the diagram to the right. Next, two strips of loop Velcro are applied on the right side of the board. Next bend along all of the score lines.

Now, flip it over toward yourself, and apply one piece of double-sided tape to the left end. Peel the backing off of the double-sided tape and fold it 180° to secure it to the opposite side creating a lip. The lip prevents the iPad from sliding forward.
Apply two 3" hook Velcro strips, in front of the new lip, on both sides.

That's it. Now just roll it up and position it at the desired angle. Place four non-slip squares on the bottom to keep it from sliding. This mini iPad stand will also work with a full-size iPad.

It can be quickly unfolded and lays flat for easy transport in a backpack, briefcase, or folded in half and placed in one's purse.
