Dear Colleagues and Friends:

The Institute on Disability (IOD) at the University of New Hampshire (UNH) is designated as New Hampshire’s University Center for Excellence in Developmental Disabilities Education, Research, and Service (UCED) by the United States Department of Health and Human Services, Administration on Intellectual and Developmental Disabilities. Statutorily-mandated core functions for UCEDs under the Developmental Disabilities Assistance and Bill of Rights Act of 2000 or "DD Act" (Public Law 106-402) include providing pre-service preparation and continuing education; conducting community services such as training, technical assistance, or other direct services; implementing research, evaluation, and public policy analysis in disability-related areas; and developing knowledge. These activities—along with the dissemination, capacity building, and systems change activities also mandated by the Act—take a contemporary academic approach called community-engaged scholarship which involves mutually beneficial and equitable partnerships between the university and the community (Boyer, 1990; Commission on Community-Engaged Scholarship in the Health Professions, 2005). While the DD Act focuses exclusively on intellectual and developmental disabilities, the IOD has and continues to conduct our work with the broader disability community with four areas of emphasis: assistive technology, community living and employment, health and genetics, and early childhood and inclusive education.

This report describes the IOD’s scholarly activities conducted between July 1, 2013 and June 30, 2014. A complete inventory or organizational curriculum vitae is included with each activity labelled with its associated areas of emphasis. Highlights of our academic accomplishments include:

- Administering 57 grants and contracts;
- Producing 59 publications and other creative work;
- Conducting 133 peer-reviewed and invited presentations;
- Engaging in 69 teaching and training activities, including conducting UNH courses and guest lectures; and
- Participating in 132 community service activities, including activities at the departmental, college, university, and community level.

I hope you join me in recognizing the hard work and accomplishments of the faculty and staff of the IOD.

Sincerely,

Charles E. Drum, MPA, JD, PhD
Director, IOD & Professor of Health Management and Policy
Scholarly Activity and Engagement

The IOD is made up of 14 faculty members (2 tenured or tenure-track, 6 clinical, and 6 research) and 83 staff. In 2013-2014, the IOD had a budget of $9.4 million.

The primary academic activities of the UCED serve as interlinked and mutually reinforcing components of engaged scholarship. Each activity links to and strengthens the others to form a continuous feedback loop in a way that both helps preserve and honor the long academic tradition of a land grant university while also providing a powerful platform for contemporary academic activities.

Research at the IOD

The IOD leverages the knowledge, wisdom, and experience of both the community and its faculty and staff to address the social, educational, economic, and environmental barriers challenging individuals with disabilities and their families. Through research, the IOD seeks universalistic rather than exceptionalistic solutions to community problems—solutions that advance the ability of communities to ensure that all of their members are fully engaged, including persons living with disabilities and their families. The IOD also seeks to include the perspectives of people who are often underrepresented or overlooked in framing agendas and seeking solutions. The cornerstone of the IOD’s scholarship are the partnerships between communities and the IOD as an academic institution. The IOD’s scholarship includes research, evaluation, and knowledge translation, and is achieved through a range of dissemination activities and strategies.

Research and Grant Writing

Between July 2013 and June 2014, the Institute on Disability administered 57 externally funded grants and contracts in four areas of emphasis including assistive technology, community living and employment, health and genetics, and early childhood and inclusive education. According to UNH data, the IOD was responsible for obtaining 63% of the federal grants and subcontracts and state contracts received by the College of Health and Human Services.

Dissemination – A Commitment to Knowledge Translation

As part of its federal mandate, the IOD disseminates information to a wide range of audiences with the idea of moving research findings to real-world applications in a variety of practice settings and circumstances. The IOD has an active, carefully planned, and comprehensive dissemination strategy based heavily on knowledge translation and “implementation science” research (defined as both traditional and innovative dissemination...
mechanisms). From the beginning of a project, the IOD commits to translating findings into scholarly and other types of publications as we work to advance the frontiers of knowledge in the disciplines we represent. Part of knowledge translation is the process of converting research findings into other usable publications such as research or policy briefs, survey instruments, or a protocol that is used to make specific decisions.

**Peer-Reviewed and Non-Peer Reviewed Publications, Books, and Book Chapters**
As measured by the traditional criterion of publication in peer-reviewed journals, over the 12-month period covered by this report, IOD faculty and staff authored or co-authored 28 articles. IOD faculty and staff produced 31 other publications between July 2013 and June 2014, including 6 book chapters and one training curriculum.

**Invited and Peer-Reviewed Presentations**
Institute on Disability faculty and staff are experts in a number of academic fields, as recognized by the high number of invitations that they receive to speak on scholarly topics and the number of times they are chosen in a peer review process to speak at conferences. During the fiscal year, IOD faculty and staff conducted 92 peer-reviewed national or international conference presentations and 41 state or local presentations.

**Education**
The IOD’s academic activities include educating UNH students both inside and outside the classroom. A great deal of our teaching is interdisciplinary in nature, as represented most clearly in the New Hampshire Leadership Education in Neurodevelopmental Disabilities (NH LEND) program. The purpose of the NH LEND program is to improve the health of children and youth with neurodevelopmental and related disabilities by preparing leaders to enter the field of maternal and child health. Trainees from a wide variety of professional disciplines engage in training related to interdisciplinary, family-centered, culturally competent systems of care for children and youth with developmental disabilities and their families.

Institute on Disability faculty and staff taught 21 courses and conducted 17 guest lectures in other courses between July 2013 and June 2014. Although a majority of courses taught by IOD faculty and staff are for other departments, each course is informed by the work of the IOD. Faculty and staff develop students who value the diversity of the human experience and can recognize and confront stereotypes and see beyond narrow categories and social labels. Including individuals with disabilities as co-teachers and guest lecturers adds an additional dimension to the classroom and provides a vehicle for modeling adaptive communication techniques and giving a voice to individuals who are easily ignored or silenced.

In addition to classroom teaching, Institute on Disability faculty and staff have served on dissertation committees, mentored students to undertake research projects, co-presented with students at conferences, and included students in developing and co-authoring works for publication. The IOD also places a high priority on opportunities for community-based learning experiences for UNH students through hosting internships and other field experiences.

Through the Professional Development Center in Concord as well as online webinars, the IOD provides a substantial amount of in-service education for professionals, families, and individuals with disabilities, with arrangements for offering Continuing Education Units.

---

**The great aim of education is not knowledge but action.**

—Herbert Spencer
in appropriate disciplines. During this report period, the IOD provided one day or more of training to 2,116 participants at 31 different events. The IOD’s commitment to careful validation of training content and close connections between education and research helps promote the value of evidence-based practice among the professionals and organizations with which the IOD interacts.

Service
The IOD provides service to the community not in the spirit of “serving” the “needy,” but as forms of scholarship designed to promote social equality and help shift power dynamics in society. During the reporting period, IOD faculty and staff served on 8 university, college, or department committees. Involvement in national, state, or local community memberships is a particularly strong area of engaged scholarship for the Institute on Disability. IOD faculty and staff participated in 70 local, state, or national committees and 35 professional associations. Faculty and staff also serve as grant reviewers for many federal agencies including the National Institute on Disability and Rehabilitation Research.

Conclusion
From a traditional and contemporary academic perspective, the list of IOD achievements during the 12 months covering this report is singular. The Institute on Disability is fortunate to have the best of all worlds—an academic home and all the accomplishments of a highly motivated and productive faculty and staff and a mandate from its core funding agency that is congruent with its core values and principles to engage the community in scholarship. Even the best of institutions must continuously strive for excellence. The IOD is committed to sustaining its achievements in higher education, as well as the renewal of the communities it serves.
Grants and Contracts
